

headline: **A Trouble-Free Datacenter Relocation? Without Business Disruptions?**

Subhead: ***Yes, It's Possible...***

Are you worried about your upcoming datacenter relocation?

If so, that's certainly understandable. There's plenty that can go wrong. And if any of those things *do* go wrong, the fallout can be quite costly.

But a disastrous datacenter relocation is just one possible scenario. Here's another: Your datacenter relocation can be a pleasant, rewarding experience, free of trauma and fallout.

We know how to make that happen.

subtitle: **The Key to Success Is in the Planning**

With any datacenter migration, the key to a successful outcome revolves around formulating a thorough, detailed plan. The plan *must* be tailored to your specific situation. Because after performing countless datacenter migrations, we can assure you: no two are exactly the same!

The plan must also be *highly* detailed. Components of the plan we'll formulate for you will include:

- **Identification** of every single component within your datacenter
- **An exhaustive analysis** of the interactions and interconnections between these components
- **Advanced planning** that will, in effect, create a detailed plan-of-action for disassembling and rebuilding datacenter components in a way that assures *minimal* business disruptions
- **Planning for the incorporation** of any new hardware that will be included in your reconstructed datacenter
- **Planning a layout** of the reconstructed datacenter that will facilitate any future expansion needs

subtitle: **Customized Infrastructure and Cabling Solutions**

Surprises are great for birthday parties and Christmas mornings. But you don't want to experience *anything* the least bit surprising during your datacenter relocation.

And that's where our world-class expertise as *The Migration Experts* becomes so valuable. We know exactly how to design and customize end-to-end path and

cabling solutions that will ensure that no surprises are encountered on moving day.

We'll establish cable and equipment labeling schemes that are tailored to your environment as part of the moving process.

But a datacenter relocation also offers a great opportunity to prepare for the future. So we also make certain that labeling schemes are easily understood and repeatable throughout the lifespan of your datacenter.

subtitle: **A Better-Than-Before Datacenter**

The DAG approach to datacenter relocation isn't simply about *moving* your datacenter. It's also about leaving your datacenter better than we found it. And we'll also leave you better positioned to manage your new datacenter.

We'll do that by providing you with detailed mapping and documentation of your new system - a living management tool that will ease maintenance and management going forward.

Just one of the many benefits of a datacenter relocation performed DAG-style.
